

## MFP FaxManager

### Introduction

With the introduction of the great HP Multi Functional devices there is a growing need for helpful tools to use with these devices. MFP FaxManager provides an easy to use FaxManager solution for incoming faxes on your HP MFP.

### How FaxManager works

FaxManager enables the HP LaserJet MFP to send incoming fax documents to an e-mail inbox or to an FTP server. FaxManager is stored on the printer hard disk. It can run on most HP LaserJet MFPs with an onboard analogue fax. FaxManager can be configured through the MFP's web interface and will set the option "Fax Printing Mode" to "Store All Received Faxes". This will enable the device to store incoming faxes on the hard disk in TIFF. FaxManager will poll this location and will process the fax when a fax is stored. FaxManager will send the document using the configured setting via email, FTP or both. FaxManager will not do any conversion of the stored faxes.

### Why you need FaxManager?

**Security** - Guarantee that nobody can read the confidential information in the output tray at the MFP because it will not printed.

**Archiving** - All incoming faxes are sent to e-mail or an FTP server for further processing or for immediately archiving in a document management system.

**Savings** - Saving time in collecting faxes from the fax machine and distributing them throughout the organisation. MFPToolBox will prevent the MFP to print incoming faxes. It will only send to e-mail or to FTP thus reducing paper usage.

**Distribution** - After capturing the incoming fax it can be sent to a specific default e-mail address which represents an unlimited distribution list of recipients. All predefined recipients will receive the information immediately and at the same time.

**Efficiency** - All incoming faxes will be handled automatically and transmitted to e-mail or FTP instantly. No need to check the MFP from time to time to see if it has received a fax. The location of the MFP is not relevant anymore.

**Accuracy** - No more missing relevant faxes, they are directly sent to your e-mail inbox.
