JetCAPS®
Prescribe
Emulation

adding prescribe to the languages on your hp LaserJet printer

JetCAPS Prescribe matches your requirements for managing Kyocera data-streams on HP LaserJet printers.

If you are making the change from Kyocera printers, or are trying to rationalize a printer pool that has a mix of Kyocera and HP LaserJet printers, you need a way to decouple your printer hardware from your software and application considerations, and quickly avail of all the benefits for which you have chosen HP LaserJet printers.

JetCAPS Prescribe is a combined Prescribe emulation and forms package available in a number of different configurations, either built into individual printers or running on your print server to cover a number of devices.

how the JetCAPS Prescribe works

JetCAPS Prescribe, either installed on a memory module in your printer, or running on your print server, examines incoming print data, and when it recognizes Prescribe data, performs the necessary translation to create a replica of the Kyocera printout on the HP LaserJet printer.

JetCAPS Prescribe FormMaker helps you develop electronic forms on your computer screen. The resulting electronic overlays are then stored on the memory module or on the server, for use by practically any application – including SAP R/2 and R/3 and most other ERP applications – printing to Kyocera or HP LaserJet printers, independently of platform and operating system. When the form is being printed JetCAPS Prescribe automatically includes and formats relevant data from the print job as well as data from other sources, and controls paper handling. Because the form overlay is on the print server or in the printer, only the variable data for the form needs to be transmitted, which means that JetCAPS Prescribe helps to relieve network congestion.

Printed on an HP Color LaserJet Printer

characteristics

- makes HP LaserJet printers Prescribe compatible
- electronic forms capabilities
- independent of applications and operating systems
- works with SAP R/2 and R/3 and most ERP systems
- easily installed and maintained (includes flash technology for easy upgrades)

areas of application

- for the replacement of Prescribe printers without requiring changes to applications
- producing forms on demand

special features

- increases printer performance and decreases network traffic by keeping the fixed elements of forms and stationery in the printer, or on the print server
- manages paper handling
- allows central administration of forms

ordering information

- The JetCAPS Prescribe DIMM is available with or without 2,5 MB non-volatile memory for the storage of form data for the HP LaserJet 4050, 4100, 4550, 8100, 8150 and 9000 series printers. Form data can also be stored for use from the hard disk in the printer.
- The JetCAPS Prescribe Server software for Windows NT/2000/XP uses the LPD-protocol so that JetCAPS Prescribe is accessible from any computer on the network.
